

RAAVI PRANAY

AI Engineer | Generative AI | LLM Applications | Python, FastAPI

+91 9346876340 | pranayraavi23@gmail.com | LinkedIn | GitHub

Professional Summary

AI Engineer with 1+ year of experience building LLM systems for enterprise SaaS products. Built backend services for a multi-tenant enterprise AI platform with an agent runtime, document ingestion and MCP tool integration, and delivered a RAG-based assistant grounded in support and knowledge-base data. Works mainly in Python, FastAPI and MongoDB, taking AI features from prompt and retrieval design through backend APIs to deployment.

Technical Skills

GenAI and LLMs: LLM APIs, RAG, hybrid retrieval, embeddings, reranking, semantic search, AI agents, tool calling, MCP, LiteLLM, prompt engineering

Backend: Python, FastAPI, gRPC, Pydantic, Celery, REST APIs, microservices, pytest, Postman

Databases: MongoDB, PostgreSQL, Redis, Qdrant, Pinecone

Frontend: Next.js, React.js, TypeScript, Tailwind CSS

Tools: Git, GitHub, Docker

Work Experience

AI Engineer

Nainovate Technologies Pvt Ltd

Jun 2025 – Present

Hyderabad

GenX – Enterprise AI Platform

Python, FastAPI, gRPC, MongoDB, Qdrant, Pinecone, LiteLLM, Redis, Docker

- Built backend microservices for a multi-tenant enterprise AI platform with tenant isolation and secure service-to-service communication.
- Developed an agent runtime supporting RAG, multi-agent and tool-calling workflows across multiple LLM providers using LiteLLM.
- Built document ingestion and integrations with Jira, SQL, S3 and SharePoint for custom AI agents.
- Integrated MCP tool servers with credential encryption, tool-level risk policies and human approval for write actions.
- Developed FastAPI services with RBAC, audit logging, error handling and pytest-based testing.

AI Decision Workspace – LLM-Powered Enterprise Assistant

Python, FastAPI, Celery, MongoDB, Redis

- Built a RAG pipeline using document chunking, embeddings, semantic search and context retrieval over support and knowledge-base data.
- Designed structured LLM outputs using Pydantic models with versioned validation contracts.
- Built scheduled AI workflows using Celery with traceable execution for auditability.
- Improved prompts and retrieval settings to keep responses grounded in enterprise data.

Projects

Rootkit Detection using Stacked Ensembles

2024

- Built a stacked ensemble classifier for malicious system behavior that outperformed each individual base model.
- Python, scikit-learn*

Electric Vehicle Range Prediction

2024

- Trained regression models with feature engineering to predict EV range from vehicle and environmental data.
- Python, scikit-learn, pandas*

Education

B.Tech in Computer Science and Engineering

Karunya Institute of Technology and Sciences

May 2025

Certifications

Microsoft Azure Data Fundamentals | Google Data Analytics
